### CABINETS :

Empty wall cabinet predrilled 1 96x96 panel for mounting.  
Dimensions (l x h x p):  
215x210x105mm  
Référence : **M0800-00-20**

Assembly together with modular systems :

One separator plate allows the PAN35 to be mounted on cabinet door for modular switches or circuit-breakers. It is mounted with a flange ring like a simple spacer.

Dimensions : 56x56mm.  
Delivered in 10 unit bags.

Reference : **M0817**

These are essential when you want to use outputs.

### EXTENSION CARDS :

Our panels have «open collector» type outputs. These outputs can handle 150mA currents. Extension cards increase output power and provide galvanic insulation for the unit with the rest of the installation. They save significant assembly and wiring time. The panel itself ensures relay power supply. Red LEDs indicate when each relay is activated. Screw-in detachable terminal boards ensure relay «inverter contact» output connection.

Output contacts : 1RT 6A/24Vdc - 0.15A/240Vac.  
Potential free per output.

### PLUG-IN CARDS :

Only for the J3000/J3105 :

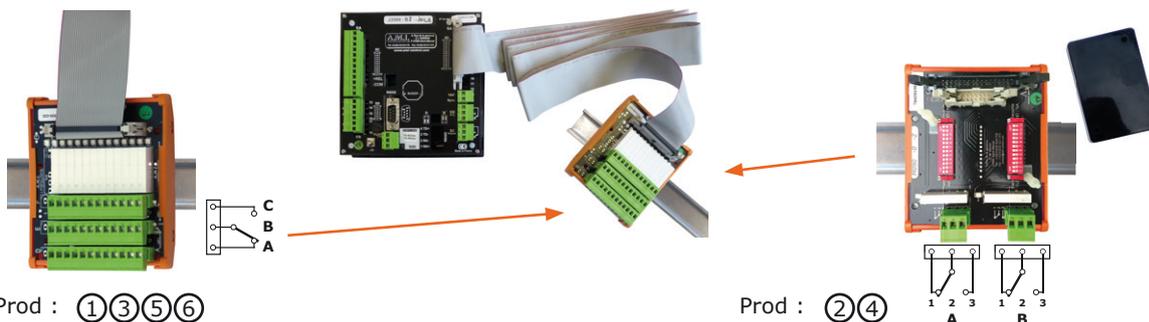

They are mounted directly to the back of the J3000. DIN cards are preferable since they limit the number of cables on the cabinet door.

They exist in version :

- M0900-02-01** : 12 relays 24Vdc.
- M0900-02-20** : 2 relays 24Vdc with selector.

### DIN CARDS :

They are fitted to a DIN rail at cabinet bottom and connected to the panel by a ribbon cable.

**- Complete relay card :**  
It comes as a standard with 12 relays and can be used 8 outputs panels as well as those with 12 output.

There is also a model with two additional relays which can be used with the «1st fault» outputs and «Synchronization».

**- Card with 2 relay outputs with selectors :**  
It allows you to sort the panel outputs towards 2 synthesis relays. The allocation of the channels on each relay is done through micro switches that can direct the output on one OR the other relays or on one AND the other. Relays can be selected «with positive security» or not.

**Use :** To direct alarms to the «electrical» or «mechanical» staff, separate alarms «high risk» / «lower risk» or «Act / Act urgently».

### RIBBON CABLE :

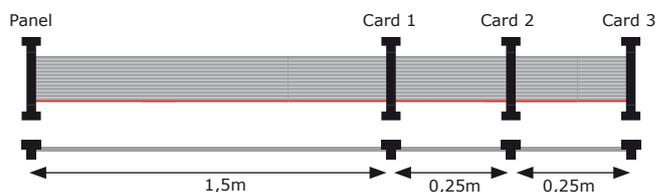

Ribbon cable with 2 keyway connectors makes the link between panel rear and relay card. It also provides power supply to the relay coils. There are cables for 1, 2 or 3 cards (maximum). The standard length is 1.5m. supplementary 50cm sections can extend this up to 3 meters maximum.

## INSTALLATION ON DIN RAIL KIT :

This kit allows the installation of the panels to 96x96 size and 144x144 on a DIN rail profile TS35 all keeping the display toward the operator.

**M0730** Adapter for 144x144 panel.

**M0731** Adapter for 96x96 panel.

## TEST AND DEMONSTRATION KITS :

Comprising 2 cards with connectors, they attach directly to rear panel connectors.

Input contacts can be simulated through the micro-switch that is on the Kit.

Push buttons in the Kit are used for cancellations and resets.

The sound alarm output is audible through a buzzer in the Kit and is visible through LEDs.

Outputs are visible through LEDs.

A 230Vac power supply is provided.

Use only with products on version «02» (24V supply).

For other voltages, thank you contact us.

A connection instruction sheet is included.

## CHOICE OF SUPPLEMENTARY LEDS :

Normal LEDs have only one single colour.

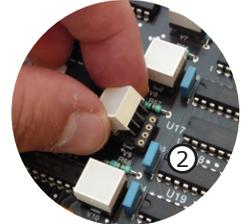

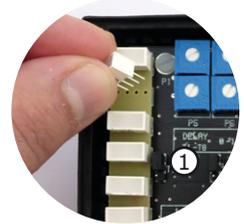

It is necessary to change the LED to change the colour.

Our previous version products use this solution and are unpluggable from the front face, allowing the user to choose the desired colour.

Technology development means that we can use the CMS tri-LED unit giving us 7 different colours per LED with the same component.

All our products will be modified to use this new technology as we go along.

## J0500-00-00 LABEL PRODUCTION :

Software developed under EXCEL™ (Microsoft Company) easily produces front face labels for all A.M.I. products. After on screen creation, you only need to print them on a laser printer, and store them on disk for later modification as needed.

You select the A.M.I. product for which you want to produce labels, using a PC with EXCEL™ software.

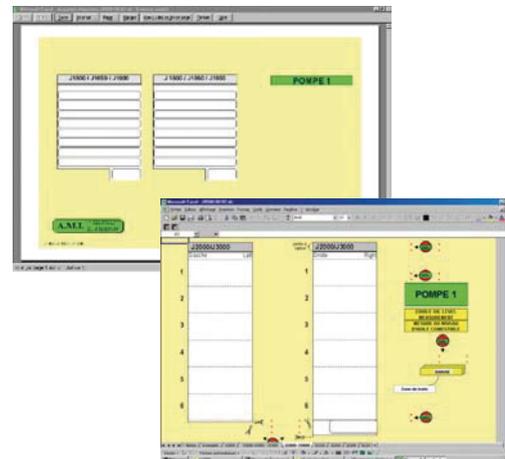

You type in your text in the predefined templates for the exact dimensions of the desired product.

Depending on the capability of your printer you can choose :

- Basic colours or text colours to attract the eye for certain significant tracks,
- The normal or plastic paper type depending on the environmental ambience of the product destination.
